ABSTRACT

For a number of years, analyses have been conducted each fall term to determine changes in the draw of high school graduates to Miami-Dade Community College (MDCC) from the Dade County Public Schools (DCPS). Findings of the fall term 1990 study include the following: (1) 4,676 of the 13,156 Dade County public high school graduates enrolled at MDCC (35.5%), representing an increase in absolute numbers but a decrease in percentage drawn when compared with 1989 data; (2) North Campus and Wolfson Campus increased in absolute and proportional draw of high school graduates, while South Campus decreased in both of these measures; (3) the White non-Hispanic student draw was 767 students (24.4%), the Black non-Hispanic draw was 1,034 (24.8%), and the Hispanic draw was 2,792 (49.5%); (4) South Campus led the proportional draw of graduates by recruiting area with 40%, while Wolfson Campus drew 36% and North Campus drew 29%; (5) 11 of 24 high schools decreased in percent of high school graduates drawn to MDCC in 1990; (6) the three schools with the biggest absolute drop in draw for fall term 1990 were Killian (55 fewer students), Palmetto (a drop of 43 students), and North Miami (a drop of 29 students); and (7) the top five schools for the greatest absolute number of draws to MDCC were Sunset (449 students), Coral Park (356 students), Southwest (336 students), Hialeah (297 students), and Miami Senior (269 students). High School Draw:
Direct Entry Enrollment of Dade County Public High School Graduates by Ethnic Category

Introduction and Purpose

For a number of years, analyses have been conducted each Fall Term to determine changes in the draw of high school graduates to Miami-Dade Community College (M-DCC) from among the graduates of the Dade County Public Schools (DCPS). Entry to M-DCC is considered direct if it occurs within one year of high school graduation. Past studies define high school graduation by geographic region, specific high school and, more recently, by ethnic group. In addition, over the past few years, qualitative findings (Vorp,1989c) provided a basis for capturing a more complete picture for recruitment applications. Feedback of factors influencing college choice, student attitudes, perceptions, and preferences resulted in refinement of strategies for targeting recruitment populations.

Historically, five high schools - Carol City, Central, Edison, North Miami Beach, and Northwestern - have had low student draw (20% or fewer of draw potential) to the College from each graduating class (see for example R.R. No. 90-06R). In 1990, while still in low relative standing, each of these schools has had absolute and percentage increases in students enrolled at M-DCC. These increases ranged from two percentage points to a notable nine percentage points, with Northwestern at the high end. Only two schools, Carol City and North Miami Beach, remain in the low draw group.

This research report presents the Fall Term 1990 direct entry student draw of high school graduates to M-DCC structured by several questions:

1. How has the overall College draw, and the draw by ethnic categories changed in the 1990 Fall Term?

2. What is the overall distribution of the high school draw among the campuses of the College?

3. To which particular high school can the gains or losses in draw be traced?

4. What progress in draw has been made by the chronically low draw high schools?

5. What are the details of the distribution from each high school to each of the College's campuses?

For this report, the Miami-Dade Community College data base comprises all Fall Term 1990 enrollees having a Dade County public high school graduation date within the prior year, regardless of age at time of graduation. High school graduation totals were obtained from the Office of Accountability of the Dade County Public Schools.

Discussion of Findings

1) How have overall College draw and the draw by ethnic categories changed this past Fall Term?

Table 1 shows College-wide data for the high school draw by ethnic category. For the Fall Term 1990, there were 4,676 students enrolled at M-DCC of the 13,156 DCPS graduates. While the number of graduates increased over the two comparison years, and while the absolute draw total increased, the proportionate draw decreased slightly to 35.5% compared to the 1989 draw of 35.7%.

The Black non-Hispanic draw has grown to a high of 24.8% in Fall 1990 as opposed to 20.5% in 1988. The draw of White non-Hispanic students is now 24.4% (767) of the White non-Hispanic high school graduates, the lowest since the early 1980's. For the first time, the absolute and proportional White non-Hispanic draw fell below the Black non-Hispanic draw. For Hispanic students, though the proportionate draw across three-years dropped by two percentage points to 49.5%, the absolute draw increased.

2) What is the overall distribution of the high school draw among the campuses of the College?

Table 2 gives the high school draw by campus. Across a three-year period, the proportional draw from recruiting regions fluctuated within a narrow range. The draw both proportionally and in absolute enrollments increased for North Campus and Wolfson Campus; it decreased on both counts for South Campus. The proportional draw in 1990 for the North recruiting schools was 29%, for South - 40%, and for Wolfson - 38%. North Campus drew 85% or 1,193 of the enrollees from its own recruiting area and the percent draw from the other M-DCC campuses was fairly even and little changed. South Campus drew 2,027 or 95% of the enrollees from the south area high schools. Note that the figures for the newly established Homestead Campus are in parentheses and have been incorporated into the South Campus data. Wolfson Campus drew 47% of enrollees from its own recruiting high schools. The recruiting overlap with South Campus for Coral Gables High School is, in part, reflected in 25% of enrollees choosing the South Campus. Recruitment overlap with North Campus for Edison High School, partially explains the 22% enrollment draw at North Campus.

3) As of Fall Term 1990, to which particular high schools can the gains or losses of draw be traced?

Table 3 displays the high school draw for individual schools categorized by patterns in the draw. The top two categories present increases in draw and the bottom two categories show decreases in draw. Three years of data (1988, 1989, 1990) for high school graduates, M-DCC Fall Term draw, and percent draw are given. The high schools fitting each category are listed in the first column. M-DCC recruiting campuses associated with the high schools are shown in the second column. Where two campuses are indicated, the recruiting region is shared between the campuses.

For Category 1, despite decreases in number of graduates, three schools show increases in absolute and proportional draw. This is a considerable achievement in that growth occurred in a "tighter market." Two of these schools, Central and North Miami Beach are chronically low-draw schools. The draw from Sunset has increased

to 50%, and this high school has the largest number of graduates drawn to M-DCC (n=449) of all schools.

Category 2 (increase in absolute and in proportional draw with increase in graduates) includes nine schools. This is a positive category in terms of growth of the three measures identified. Four schools which evidenced chronically low-draw in the past --- Carol City, Edison, Jackson, and Northwestern---are now in Category 2. The biggest gains in percentage points occurred for American, Miami Beach and Northwestern (six, eleven, and nine percentage points respectively). For Northwestern, this represents a high; in 1989, it ranked at the bottom of all high schools in percent draw. Appended to Category 2 because of its nearly perfect fit is Hialeah-Miami Lakes which had increases in both graduates and absolute draw though the percent draw remained unchanged.

Coral Gables, Hialeah, and South Miami fit into the Category 3 pattern of decrease in absolute draw or decrease in proportional draw. The percent draw for both Coral Gables and Hialeah has dropped consistently over the past 3 years. Though the draw percent increase is minimal in 90-1 for South Miami, M-DCC is attracting 51% of its graduates.

Nine schools experienced a decrease in absolute and proportional draw (Category 4). The reader should note that for the first time, most South Campus high schools fall into this category. Killian, Palmetto, Southridge, and North Miami have the biggest drops in absolute draw this Fall Term. Some of the schools with the greatest absolute number of graduates drawn to M-DCC - Coral Park (n=356) and Southwest (n=336) - are in this fourth category.

4) What progress in draw has been made by the chronically low-draw high schools? Table 4 reconfigures the data in Table 3 to emphasize ordering by percent draw. There are four high school clusters in low to high order: 20% or fewer graduates enrolled at Miami-Dade; 21%-33%; 34%-49%; and 50% or more. The draw

categories of the previous table are seen in the third column and definitions are footnoted.

There are now just three schools in the low draw group, Palmetto being the newcomer. Both North Miami Beach and Carol City have been chronically low draw schools. But these schools have improved for each of the years shown. Palmetto's draw is at a three year low and the nine percentage point drop in draw is the largest decrease among high schools in 1990 and the second largest for absolute enrollee decrease of draw.

A range of 21%-33% draw can be seen in the second cluster of nine schools. With a few exceptions, the change in number of high school graduates parallels the change in percent draw. That is, positive changes in graduations resulted in positive percent changes and the reverse also follows. South Dade's drop in draw was steep (-8 percentage points) and in the face of its rising graduations. Jackson's draw continues to improve, reaching an historic high of 29%. Three other schools that were formerly chronically low in draw (Central, Northwestern, and Edison) improved sufficiently to attain status in this second cluster.

The third cluster is a relatively high draw one (between 34% to 42%). But of the seven schools in this cluster, four decreased in percentage point draw, one exhibited no change, and two showed strong percentage point draw increases (Miami Beach and Miami Springs).

The final cluster gives the highest draw schools. Though still in a high draw position (50% or greater), three schools in the group experienced declines in draw over 1989. The drops in percentage points for Southwest and Miami Senior were considerable (-7 and -6 percentage points, respectively).

Across clusters, the five schools with the highest absolute decrease in draw for 1990 are Killian (n= -55), Palmetto (n= -43), North Miami(n= -29), Southridge (n= -28),

and Southwest (n= -25). At the other end of the spectrum, the five schools with the highest absolute change increases are Miami Beach (n= 62), Miami Springs (n= 39), American (n= 34), Northwestern (n= 31), and Carol City (n= 25).

5) What are the details of the distribution from each high school to each of the College's campuses?

North Campus High Schools

Table 5 features the high school draw by campus for North Campus schools. The left side gives the high school from which the student was drawn, accompanied by the M-DCC campus to which the student was drawn. On the right division of the page, college-wide totals and percents are shown. Both total draw and percent of graduates drawn (29%) from among the DCPS graduates in the north area schools have increased for 1990 over 1989. For eight of the nine schools in the recruiting region, the absolute draw of enrollees has increased on North Campus even though the percent draw did not increase correspondingly in every case. North Campus is the campus of attendance for 85% of the graduates drawn from the north recruiting schools. The draw to the other M-DCC campuses (15%) is scattered and proportions are fairly even. Only two schools, Carol City and North Miami Beach, are still chronically low-draw schools (a draw of 20% or less). They have improved to a position of being just borderline low draw. In 1990 the schools with the highest percent draw of DCPS direct entry from the north recruiting area attending North Campus classes are Carol City (97%), Hialeah (88%), Norland (88%), and Northwestern (87%). Tables 6-9 offer the ethnic details for the North area high school draw to North Campus. These tables are left for the reader to examine.

South Campus High Schools

Table 10 gives the high school draw by campus for schools in the South Campus recruiting area. The left column displays the high schools in the South recruiting region, followed by the M-DCC campuses to which these students are drawn. The columns on the extreme right show totals and percent of graduates drawn. The figures in the parenthesis are enrollees at Homestead Campus and these figures have been incorporated into the

South Campus totals. Overall, the total for number of high school graduates, total draw, and percent of draw for South Campus have all fallen. For 1990, the draw was 40%. Of the nine high schools in the south recruiting area, eight declined in the draw of graduates and percent drawn. Most of these schools normally have the highest absolute draw among all schools recruited. The one school that increased in absolute draw and percent of draw despite decreasing graduations was Sunset. As expected, most of the South region high schools were drawn to South Campus. Small numbers are distributed on College campuses outside of the South area (4.5%). Tables 11-14 give the ethnic draw in the South region and these are left for the reader to examine.

Wolfson Campus High Schools

Table 15 presents the high school draw for the Wolfson Campus. There are six schools in this region as listed in the left column, followed by the College campus to which they are drawn. Totals and percents are seen on the far right of the page. All measures have increased. The draw of high school graduates has increased by two percentage points. All schools show increases in numbers graduating and it would, hopefully, follow that the total draw for them would similarly increase. This has been the case for five of the six schools. The exception, Miami Senior, while graduating more seniors, had a substantial six percentage point decline in draw to the College. A five percentage point draw increase is seen for Miami Springs and an impressive nine percentage point increase occurred for Miami Beach. The campus of attendance is quite diverse for this region. Nearly 53% of these students are dispersed on North, South, and Medical Campuses (22.2%, 24.6%, and 6.2% respectively). The remaining 47% attend the campus downtown. Tables 16-19 deal with ethnic draw data and are left for the reader to examine.

Summary of the Report

The purpose of the present report is to monitor the changes in the draw of high school graduates to Miami-Dade Community College. This is reported each Fall Term, by high school recruiting region for each of the College's campuses.

Some findings of the report follow:

* For the Fall Term 1990, 4,676 of the 13,156 Dade County Public high school graduates enrolled at Miami-Dade (35.5%). This represents a slight increase in absolute numbers of students drawn but a slight decrease in percent drawn over 1989.

* North Campus and Wolfson Campus increased in absolute and proportional draw of high school graduates; South Campus decreased in both of these measures.

* Draw by ethnic group - The White non-Hispanic student draw is 24.4% or 767 students, the lowest since the early 1980's. For the first time, the White non-Hispanic draw is below the Black non-Hispanic draw. This is true in absolute numbers and proportions. The Black non-Hispanic draw is at a high of 24.8% (n=1,034). The absolute number of Hispanics (2,792) has increased though the percent draw has decreased by 2 percentage points to 49.5%.

* Chronically low-draw schools - Only three schools are now in the low-draw category (20% or less) but two of them are on the borderline of the next higher cluster. The draw from Northwestern increased by nine percentage points. The draw is now 21% compared to 12% last year. Miami-Dade drew 29% of the graduates from Jackson which was formerly a chronically low-draw school.

* The proportional draw of graduates by recruiting areas are: North - 29% of potential recruits, South - 40%, Wolfson - 36%.

* Eleven of 24 high schools decreased in percent of high school graduates drawn to M-DCC in 1990.

* The three schools with the biggest absolute drop in draw for Fall Term 1990 are Killian (n= -55), North Miami (n= -29), and Palmetto (n= -43). Palmetto dropped nine percentage points, the largest decrease among high schools and the second largest for actual loss of draw.

* The top five schools for the greatest absolute number of draws to M-DCC are Sunset (n= 449), Coral Park (n= 356), Southwest (n= 336), Hialeah (n= 297), and Miami Senior (n= 269).
